Category:	Application		
Target version:			
Version:	1.2.1	**Language:**	English (US)
Platform:	Windows	**Mod Related:**	No
Expansion:			

Description

KSP 1.2.1 with mods crashed while flying an airplane in atmosphere - it happened shortly after clicking on RMB trying to change camera view.

History

#1 - 12/05/2016 03:01 AM - Anonymous

- File crash.dmp added

- File error.log added

- File output_log.txt added

I have the same issue on a modless install. I've found that it'll crash pretty much whenever it feels like it, but it's always the same access violation (ffffffff).

One thing I feel is worth nothing: since I've noticed this issue, I've repartitioned my hard drive. Before, it was in two parts, but now it's all on one drive. Before, the memory locations were somewhere around 00000000, but now it's always ffffffff.

Here's my logs as well, for reference.

#2 - 12/05/2016 03:05 AM - Anonymous

Okay, apparently it's a known bug:
http://forum.kerbalspaceprogram.com/index.php?/topic/151937-ksp-crashing-after-taking-a-few-screenshots/&do=findComment&comment=2848929

Just don't use the aero overlay I suppose.

#3 - 12/18/2016 08:42 PM - jiim

- Status changed from New to Confirmed

- % Done changed from 0 to 10

Confirmed, workaround looks to be working.
