Kerbal Space Program - Bug #13707

Phantom Debris on screen

01/29/2017 08:48 AM - Maximitas

Status:	New	**Start date:**	01/29/2017
Severity:	Normal	**% Done:**	0%
Assignee:			
Category:	Camera		
Target version:			
Version:	1.2.2	**Language:**	English (US)
Platform:	OSX	**Mod Related:**	No
Expansion:			

Description

I recently built a new unmanned satellite:

!Screen Shot 2017-01-29 at 8.26.07 am.png!

There are 3 bugs here:

1. For some reason, the funds counter in the bottom left is blank.
2. If I put this satellite on the launchpad, and go back to the KCS overview screen, it displays a debris icon, not a satellite icon, as seen here:

!Screen Shot 2017-01-29 at 8.38.41 am.png!

However, in the Tracking Station, the icon is still a satellite.

3. If I click on the launchpad and select "recover vessel", the debris marker will stay on the screen in the exact position it was on the screen when I clicked "recover vessel".

This is why there were 3 debris markers in the VAB screen in the first image.

As far as I know, this does not occur with any other rocket.

If I click on the debris marker, this pops up:

!Screen Shot 2017-01-29 at 8.44.40 am.png!

Clicking "fly" or "recover" will not do anything.

The debris does not show up in the Tracking Station.

Well, if it's just this one rocket that ever shows the bug, then we need a copy of the craft file for the rocket.
