| **Expansion:** | | | |

**Description**

This happens almost everywhere beyond KSC but also on the Mun and Duna.

Take a drive, I suggest the Charger R/D on Kerbin, the Space Charger on Mun or Duna.

The reason a drive is needed: the collider mismatch **seems to change location!**

Space Charger instructions:
AG 1 toggles reaction wheels
AG 2 cycles SAS modes
AG 3 toggles fuel cells (the car is an AWD)
AG 4 toggles rocket engines
AG 5 toggles ion engines

This happens to me as well. Aproximately 10 km from KSC, heading 315. It's a hole that can swallow up a rover.

Also right beside the runway. This image is from the wreckage looking UP towards KSC.

I've checked this in the latest version of the game and cannot reproduce. Could you please check this yourself and update this bug with your results.
If this is still happening please provide coordinates of where this is happening and a save file of the bug.
Thanks
