Kerbal Space Program - Bug #25863

Helicopter blades works weird on EVE

Expansion:	Breaking Ground		

Description

I had helicopter which works great on kerbin and duna. But Eve makes aerodynamics work wrong at higher rpm. Low rpm everything works nice but when going over 8m/s blades shows that they makes downward lift, ship starts shaking bad and speed meter shakes badly too.

Going even more rpm game starts lagging bad.
This doesn't work anything as expected.
