But how did that not get caught...it's a control, not some flipped out clipping issue...bug that crashes...who is your qc, and how the fuck did he miss that? How is this game going to be worth the money when you the first thing most simplistic thing out there (a control, which the others are correct, but this one...one control wasn't tested? So I guess we will have to go test all of your controls for you...to make sure.)

Just more clarification, it's a scenario in game.

Also Uninstalled and reinstalled game.

Also used different controls, via ps, they worked but screwed with the flow of the game. Used up and down on the d pad

It works, finally got my other controller back, and could do the r2 eva, just shocked it doesn't work with the other controller as it works in my shooters.

It's working for me, I borrowed a ps4.

So it's just the one pad you own that has this issue?

EVA works fine for me all the time without problem on all 4 of my controllers.
