Description	
Savegame fix a like.	
The peristant file is the one thats f#%#%# up your save file (i know this because i have the game from beta on PC, and having the same kind of problems then... (Adjusted the save from 300sec to 999999sec did the job, unfortunately we cant do that on ps4)	
What u need to do is this:	
<ol style="list-style-type: none">1. Build/fly/ do whatever u want to do.2. U need to "push" a save on the peristant file, this can be done with changes on your money/science. Like take a contract/kerbal/use science. (Check the amount before/after trying the puch)3. After u are sure this has been done, close ksp asap (close application, from ps4 menu)4. I use a usb and i use upload to save/backup my game data (i can always go back 1/2 steps and thats better that start all over again) upload or save the game to usb/upload.5. Restart the game, and cross your fingers.6. This way i tested for like 5/10 times and no corruptions till now.	
This might be not working for u... For me it does, so I thought "lets share".

Hi Armand038, can you please add your findings to issue [#10111](#) so others can find it there as well as here.

Thank you.

This was working, not anymore. Its totally unplayable atm... Every time i play the game crashes and it will cause loss of save

#4 - 08/25/2016 07:08 PM - ggargioni

I experience the same problem dor many days and many tries. Had manage to not have such corrupted file by not mantaining a stockpile of saves in VAB. In order to proceed well i delete all my designs before exiting to main menu. Than closing game, then shutting down ps4. Also if the game crashes and you report the problem it corrupts the file, so when crash simple tap circle. That was my findings for this issue. Thanks - hope to see a fix soon.
