Description

Hi this game crashed just at the beginning.

Start Game > Resume Game > Load (science mode) > and then (I think) I clicked on the R&D facility, but not sure.

The game generated a controlled crash, in the sense that a window appeared telling that a folder with dump data had been created (attached).

Windows 10

Regards

If not the R&D facility, try just entering the tracking statation. It has happened to me 2 more times today.

Can you replicate this without mods?

- File crash.dmp added

- File error.log added

- File output_log.txt added

I had a similar thing happen. I was in the VAB. As I was moving rocket parts around, they disappeared off the screen. Then the game crashed and gave me the "oops" window. Crash dumps attached.
