Platform:	Windows	Mod Related:	No
Expansion:			

Description

Hello. I am unable to play ksp. It has worked fine for about 5 months but has now decided im a worthless piece of scrap and is showing this by opening in a (at most) 40 x 40 pixel screen. the ui is unscaled by this, making it impossible for me to reset. uninstalling has no effect.

Look in the settings.cfg file with in the "Kerbal Space Program" folder. At line 44 and 45 you can adjust the resolution manually. I hope this helps you to solve the issue.

As a bug though...unless you can replicate it there is not much that Squad can do. The report is not all that detailed and really, this is not a support forum. ;-)

#2 - 07/27/2013 11:46 AM - Anonymous

- Status changed from New to Closed

- Severity changed from Critical to Unworthy

- % Done changed from 0 to 100

Also this is an outdated version. I'm closing this for now. If the problem persists create a thread on the forums :)
