Platform:	Linux	Mod Related:	No
Expansion:			

Description

I have been experiencing some slow down. Like a split second pause. During warp it even seems to go in reverse for a frame. I have started using the ~~Log errors to screen~~ option in debug settings.

Whenever I switch to a different craft I get this error on screen: AudioFX: Cannot find transform of name "

This appears in the log after this message : Cannot assign AudioClip " to AudioFX

Both of these messages spam the log a couple of dozen times.

History

#1 - 10/25/2016 01:16 PM - Daveroski

Having looked at the forums, it seems that the slow down or stutter is a separate bug to the AudioFX error message.

I'm running vanilla KSP should I be getting this error?

#2 - 11/06/2016 09:46 PM - Azimech

- Status changed from New to Confirmed

- % Done changed from 0 to 10

The "cannot assign "" to AudioFX" happens on Windows too, I'm glad to know it's platform independent.
