Kerbal Space Program - Feedback #13119

"Focus cameraview to part" should be standart, not advanced setting

Description

As topic, for new players, it's frustrating to tinker around with standart camera views (sliding and zooming) when docking for example. I know by experience, but with advanced camera option, it's more easy. Since advanced options is off by default, they may not realize such easy way.

I'm still trying to figure out what those other advanced settings do, but the camera is understandable for everyone.
