

Kerbal Space Program - Bug #13420

TT-38K Radial Decoupler fits badly on FL-T Fuel Tanks with Snap To

12/13/2016 04:35 PM - mmroww

Status:	Updated	Start date:	12/13/2016

Expansion:			
Description <p>When TT-38K decoupler is attached to FL-T Fuel Tanks in six-sided symmetry, everything is OK. But when they're attached three times in dual symmetry, and then each pair moved with Snap To activated, they assume different positions than with a regular six-sided symmetry.</p> <p>With the FL-T200, it is then nearly impossible to attach the BACC "Thumper" Solid Fuel Booster to some of them.</p> <p>The 0-90-180-270 degree attachments seem OK, but the others are off, sometimes to the point that it is necessary to use different configurations of Fuel Tanks.</p>
