Description

Hello. I have been playing KSP on Xbox One for about two weeks. Yesterday and today at the main start page I can move the cursor up and down (with the D pad) but the A button does not work. So nothing works- I can't Start Game, I can't access Settings, Credits or Switch Profile. Is anyone else having this issue? Should I just reinstall it?

- Status changed from New to Need More Info

- Severity changed from Critical to High

Hi se70co, can you try reinstalling it? I don't know if it'll work.

Squad are getting a new port made by a company called Blitworks, they have a lot of games to their credit, so the new version of KSP for consoles should be much better.
