Description

I've been playing 0.22 career mode for just a couple of hours, and encountered a strange bug.

I launched my rocket, however the black loading screen remained for an unusually long time (several minutes). The sound of a rocket firing was playing constantly in the background, and I couldn't find any keys that elicted a response.

I eventually got sick of waiting (usually it only takes a few seconds to load) and killed the game

logs are attached

Are you launching the game from steam? If so, can you please check the last view lines in the steam log ($HOME/.local/share/Steam/steam.log)?
