Kerbal Space Program - Bug #18604

Joystick is not recognized after updating 1.4.2 on OSX

04/18/2018 08:57 AM - takenoko

Status:	New		**Start date:**	04/18/2018
Severity:	Low		**% Done:**	0%
Assignee:				
Category:	Input Devices and Settings			
Target version:				
Version:	1.4.2		**Language:**	English (US), 日本語 (Japanese)
Platform:	OSX		**Mod Related:**	No
Expansion:	Core Game			

Description

Even before, it was not recognized properly.
Joystick was recognized on the setting screen, but only the setting of the joystick was not saved.

However, it got to be recognized correctly by entering the joystick's name in settings.cfg.

"settings.cfg" before:

```
AXIS_PITCH
{
    PRIMARY
    {
        name = None
        ...

    }
}
```

"settings.cfg" after:

```
AXIS_PITCH
{
    PRIMARY
    {
        name = Thrustmaster T.Flight Hotas X
        ...

    }
}
```

Currently, KSP don't recognize joystick even if I rewrite like this.
