<b>Description</b>	
Using Arch Linux and launching KSP via Steam without any special environment variables my game crashes when I try to attach Solid Boosters to Modular Girder Segements in Symetry Mode.	
I build a capusule, attach one solid booster below, switch to symetry mode, attach the girder segments, select the boosters and hover over my craft, after some wiggly with my mousy-thingy the game crashes. See KSP.log attached.	
Thanks for your efford to support linux! cheers

- File KSP.log added

Using 32bit (Steam seems to use 64bit version) version is a bit less messy.

Terminal output:

```
./KSP.x86
