Description

Inside craft light from the windows seems to move in the wrong way. This is best seen in Command Pod Mk1 and from mk1-2 side windows.

As seen from screenshots in mk1-2 kerbals lit from right, while left side of the craft is lit by sun.

Report partially duplicates that one <http://bugs.kerbalspaceprogram.com/issues/1203> but in this particular case bug isn't caused by changing axis and shows that pods are bugged themselves.

Apparently simulated sun setting light on the interior of the pod moves differently than "real" sun relative to the pod.

Notice bright spot on the pod wall moving as the sun sets. Not only it is on the opposite wall, but it also moves horizontally instead of vertically. No change in pod orientation improves it - it is always wrong.
