

Kerbal Space Program - Bug #2820

Right Click unresponsive when trying to access in flight context menus

07/21/2014 05:03 PM - Cultist_O

Description

I have to right click on a part (such as a capsule) many times before I can get the context menu to come up (the one to turn reaction wheels off etc.)

When researching the problem I saw a thread on the forums that indicated that it may be related to the number of cores, so these are my specs:

Processor: Intel(R) Core(TM) i7-3770K CPU @ 3.50 GHz
(4 Cores)
GPU: NVIDIA GeForce GTX 660 Ti
16 Gb Ram, 64 bit OS

History

I have this same problem often. Sometimes, I'll click 5 times before I can, say, select a docking port target, or really, any part's context menu. I try quick clicks, long clicks, no differences. Not sure this helps, but my info:

Intel Core i5-2310 CPU @ 2.90GHz (4 cores)
8.00 GB RAM
64-bit Windows 7
Intel HD Graphics (doesn't specify anymore than that)

Meant to say that I'm playing 0.23.5.

I see this happen only in the 64 bit version. It only happens after loading a quick save or reverting to launch (not to assembly). The more a revert/reload is done the more pronounced the effect. Entering the VAB (and presumably the SPH but I have not tried that) will correct the problem and the right click works reliably again.

I can confirm that. I is really annoying if you are playing a long mission.

I have the same problem, but only in the Windows x64 build.

I can also confirm these symptoms/fixes.
