

Kerbal Space Program - Bug #28608

Visual glitches on loading screens and on the surface of planets

01/27/2022 04:12 PM - arthurbos

Status:	New	Start date:	01/27/2022
Severity:	Low	% Done:	0%
Assignee:			
Category:	Graphics		
Target version:			
Version:	Kerbal Space Program - 1.12.3	Language:	English (US), Português-Brazil (Portuguese-Brazil)
Platform:	Windows	Mod Related:	No
Expansion:	Breaking Ground, Core Game, Making History		

Description

When a black loading screen happens, it shows some kind of "shadow" of what was being shown, for example, in one images attached to this post you can see the shadow of the main menu while loading the setting menu, another with the shadow of the buildings. There is also a visual glitch where while looking at the surface of planets at certain angles makes some black triangles/polygons appear, and another one that makes the ground not render properly. The first bug I mentioned was also found by some people on Reddit: https://www.reddit.com/r/KerbalSpaceProgram/comments/hm7nyg/ksp_110_visual_glitch/ . I appreciate the attention a=in advance and I hope that it's fixed soon. :)

- File settings.cfg.png added

Picture 1+5: I have no idea why you are having the problem with the main menu going dark like that

Picture 2: I have seen that before. I am not sure how to fix that either, usually I see that sometimes when I am higher up in the atmosphere above the KSC

Picture 3+4:

My screenshot shows how to fix the banding lines and other weird shadow effects

1. Open the settings.cfg file
2. Search with note pad for SHADOWS_FLIGHT_PROJECTION
3. All the highlighted lines from my screenshot should be set to 1. A clean install of KSP for any version 1.8 and over are wrong.
4. Save
