Target version:			
Version:	1.12.3	Language:	English (US)
Platform:	Windows	Mod Related:	No
Expansion:	Core Game		

Description

When I took data from the science Jr in orbit upon attempting to return to my ship using the EVA jetpack, I was shot off into the distance at high speed, to the point of causing unconsciousness if I tried to make inputs. It seemed like the EVA pack suddenly became 10 times as powerful, and completely uncontrollable.

Issue was resolved by reverting to previous save and simply not collecting the data.

Confirmed by attempting the same thing again, with the same result.

I have included the log but I do not know whether that is helpful or not.
