First I am not a developer just to make sure you understand that.

This is a work around to your problem:

1. Find the installation of Kerbal Space Program which should be in a folder called KerbalSpaceProgram (no spaces)
2. Then open the folder English.
3. Then create a shortcut for the executable called KSP_x64.exe and put that on your desktop.
4. Then run the shortcut.

Note it completely bypasses Epic and the Private Division Launcher but it will fix your issue and run the game.
