Expansion:			

Description

VAB/SPH design flow currently has no capability or readout of combined data about the craft that is being designed.

Very minimum information should be:

Total Mass

Dry mass

Tons of Fuel broken down by type

Thrust broken down by stage

Additional information to the level of TWR, stage ISP, delta-v and overall drag values would be nice to have.

Feature would assist new players by providing baseline numbers for some of the simpler calculations for rocket performance.

History

#1 - 08/16/2013 11:33 AM - Ted

- Category set to 36

- Version set to 0.18.4

- Platform Windows added

#2 - 07/27/2015 06:04 PM - Squelch

- Platform Win32 added

- Platform deleted (Windows)
