#### Description

When a vessel with the new Z-400 battery re-enters and gets the plasma sheath effect, it causes massive squares rippling out from the Z-400, so big that it fills the screen until you zoom so far out that the effect entirely disappears. Attached are two screenshots of one of my rovers re-entering; the first is with two Z-400s attached, the second is exactly the same vessel, only without those batteries. To double check, I tried dropping just a Z-400 from orbit, and got the same effect, but forgot to take a screenshot.

#### History

##### #1 - 03/18/2013 05:56 AM - Anonymous

- Status changed from New to Duplicate

- % Done changed from 0 to 100

This is a known bug and will most likely be fixed for the next update. Thanks for reporting it though :)
