Platform:			**Mod Related:**	No
Expansion:				

Description

When you attach TVR-200 Stack Bi-Coupler on more parts from both sides, it not fit properly. It is connected only on one side. I have bad english, sorry. Look at picture. :)

History

- % Done changed from 0 to 100

Sorry, but do to the way unity requires parent-child on all parts, one part can not have to parents. The bicoupler that you have attached on cant attach to the 2 battery's, nor the 2 fuel tanks at once. There is no way to fix this, marking as not a bug.

#2 - 03/19/2013 04:30 PM - Mr_Orion

Thought I'd come in to clarify. This is in no way a limitation of Unity - the parent-child system was something implemented and designed entirely by Squad for a multitude of reasons.
