Target version:			
Version:	0.19.1	Language:	English (US)
Platform:	Windows	Mod Related:	No
Expansion:			

Description

The "Raise" and "Lower" actions of the landing legs are swapped, raise lowers the leg and vice versa.

History

#1 - 03/20/2013 02:33 PM - zerke2001

Hello BloodyRain2k. I went ahead and created a vessel with a single FL-T800 Fuel Tank and (4) LT-2 Landing Struts (Large Landing Legs). I right-clicked on them and toggled the raise and lower switch as well as used the gear key and then right-clicked and toggled them again. I was unable to reproduce this.

Sometimes these things are caused by add-ons, so creating this from scratch on a fresh unzipped copy of the game can usually help determine whether or not it was caused by any add-ons. It would be a great help if you could provide steps to reproduce the issue.

The actions that can be bound to keys are swapped, just put the raise action onto 1 and the lower action onto 2 and you should have to press 1 to lower the legs.

I just tested this as you described where I put the action to raise the legs in 1 and lower in 2, but the outcome is reversed. I had to press 2 to raise the legs and 1 to lower them. I am marking this as confirmed.

I've just tried reproducing the issue on 0.22, but everything works as expected here. Could you please check if the issue still persists for you?

#5 - 10/30/2013 05:26 PM - BloodyRain2k

No, the new landing legs work as expected, I already tried that with making abort actions that lower the legs and it works as it should.

This mostlikely comes from the fact that they now use ModuleLandingLeg instead of the old HLandingLeg or whatever it was.

I bet that one's still swapped but if it's not being used anymore it doesn't matter so I guess this is, well not fixed, but fine so this can be closed.

Great, thanks for re-checking.

There's one small thing left now with this, the initial stage of the gear action was based for the old landing gear, but now that that's fixed the action is by default in the wrong stage.

What I'm trying to say is that when you now put a craft on the pad and press the gear button nothing happens because it's "raising" as that was with the previous swapped legs "lowering". So you have to press it another time to actually lower the legs now.
