

Kerbal Space Program - Bug #4831

Incorrect knowledge base info when docking with rescued craft

04/30/2015 02:53 AM - fibonatic

Description

When doing a rescue mission in career mode and instead of transferring the crew to the rescue craft, dock with it using the claw, then the info on the side of the screen (knowledge base) in map mode does not show stats of the docked craft correctly. What I was expecting was that I would be able to see craft info like mass, part count, ect. but what I see is the info you see when you are only tracking the craft. The same info is visible in the tracking station, which also means that I can't switch to the craft from the tracking station.

I have not tested this a lot, but it does not appear to happen with every craft. In this case it happened when the Kerbal was inside a Hitchhiker Storage Container, but it did not happen to a craft of a mk1 Inline Cockpit (maybe it only happens to a craft which is not a command pod).

History

#1 - 07/27/2015 05:57 PM - Squelch

- Platform Win32 added
- Platform deleted (Windows)
