Not a bug. "Landed" has a specific meaning in the game, meaning the ship is on solid ground. Being in the ocean is called "splashed down". So if you are required to be "landed", then coming down in the water will not work.

Providing more info:

<http://en.wikipedia.org/wiki/Landing>

'When the flying object returns to water, the process is called alighting, although it is commonly called "landing," "touchdown" or "splashdown" as well.'

Clearly, landing in water is also commonly called 'landing', making the contract ambiguous. It should be either clearly specified that water landing does not count (since when coming from space, particular place of landing is usually irrelevant) or better, the game should accept ore delivery both on land and in water.

Resolved in build 1028 by the contract stipulating the vessel must be on the land.

Please note that players are still getting confused:

In my humble opinion, the contract should be to deliver the ore on the surface. Any kind of surface.
