<b>Description</b>			
<p>I had a relatively tall spaceship with 3 crew members aboard, I selected one to EVA and dropped him down, I then walked him away from the platform (I did other actions such as jumps, jetpack etc). Then I selected another Kerbal to EVA and dropped him as well. He then began orbiting the sun.</p> <p>I have since been unable to reproduce this behavior.</p>

Closing as it's over a year old and has/can not be reproduced since. Probably an unprovoked Kraken attack.
