[Wishlist] easy support of azerty keyboards

04/30/2016 05:46 PM - kilobug

Status:	Updated				
Severity:	Low				
Assignee:					
Category:	Input Devices and Settings				
Target version:					
Version:	1.1.0	Language:	English (US)		
Platform:	Linux	Mod Related:	No		
Expansion:					
Description					
It would be nice to have an easy way to configure KSP for azerty (french) keyboards, which means basically swapping all A with all Q and all W with all Z in the config. Since there are many bindings for different part of the game, it's a bit tiresome to change them all, and the risk of missing one is not negligible.					
(I put platform to Linux because that's what I'm using, but it's very likely the same on all platforms).

- Status changed from Needs Clarification to Updated

- % Done changed from 0 to 10

Hi kilobug, we are doing a mass cleanup on reported bugs, you can read more about it here:

<http://forum.kerbalspaceprogram.com/index.php?/topic/143980-time-to-clean-up-the-bug-tracker/>

The TL;DR is that its not an indication of anything wrong with your report, there are soo many old bugs in the tracker that we cant give the devs a good picture of whats still an issue - so we have set up a process for all reports from pre 1.1.3 to collect the info and get them confirmed for the devs.

I'll set this one to updated as it sounds like something you'd still like to see
