

Kerbal Space Program - Feedback #9744

Kerbonaut complex sorting

05/21/2016 06:45 PM - Skeltek

Status:	Needs Clarification		
Severity:	Normal		
Assignee:			
Category:	Gameplay		
Target version:			
Version:	1.1.2	Language:	English (US)
Platform:	Windows	Mod Related:	No
Expansion:			

Description

It gets annoying after a while to find a certain profession or get an overview on the roster once the recruited amount of kerbals gets over 12.

It should be possible to sort the Kerbals in the complex or assembly hangars by attributes(name, profession, experience, onMission, etc) using a comparator based bubble- or bucket-sort algorithm or the like.

Prior sorting should remain a subsort of the new sorting.

- Status: new (no prior issue report on this was found)
- Priority: Normal (I would had put it in between low and normal, but the ease of implementation gives it a higher (benefit/workload)-ratio)
- Category: Crew Management (most fitting category)
- Version: 1.1.2 (though in all versions present)
- *Platform: Windows10, Vista (probably present on all operating systems)

History
