Description

I've found a bug with the EAS-1 ECS. When I tried to "command" or board it, these things happens:

1)I bounce out from it, or

2)The seat fell down through the part which is under the seat, until the ground.

I replicated it a couple of times. It appeared first time when I went to Minums and tried to land on it.

here is a video of the replicated bug

- Status changed from New to Need More Info

- Expansion Core Game added

It looks to me like the Kerbal is trying to hop up to get into the seat, and hitting his head on your crew pod. Have you tried raising the pod higher and using a retractable ladder to descend down to your cart?

- Status changed from Ready to Test to Resolved

- % Done changed from 80 to 100

I tried this every way I can in version 1.7.2, and I cannot repro the original issue. I'm thinking this is fixed
