#### Description

This is crash #3 from this evening - I finally registered to comply with the message to send the crash dump. This install is stock after switching steam libraries.

I don't know repro steps, but I frequently switch from craft to tracker to craft while managing many maneuvers. My instinct is that the game crashes about every 10 times I switch back to the space center or tracking station; it's never (or very rarely) while loading a craft.

I'm happy to upload more of my crashes if they would help and will count the craft-center toggles until the next crash. Thanks!

#### History

##### #1 - 10/21/2016 05:34 AM - nghtbrk

- File *crash.dmp* added
- File *error.log* added
- File *output\_log.txt* added

It took six cycles between craft and the center before there was another crash.

##### #2 - 06/25/2017 02:29 PM - bewing

- Status changed from *New* to *Ready to Test*
- Target version set to *1.3.0*
- % Done changed from *0* to *80*

Please retest. The code should be more stable now.

If you are still having the problem, what would be even more helpful is a savegame from just before the crash. So just make a savegame each time you try to switch to the Tracking Station.

##### #3 - 07/25/2019 12:03 AM - chris.fulton

- Status changed from *Ready to Test* to *Resolved*
- % Done changed from *80* to *100*

##### #4 - 07/25/2019 12:03 AM - chris.fulton

- Status changed from *Resolved* to *Closed*
