Target version:			
Version:	1.2.1	Language:	English (US)
Platform:	Windows	Mod Related:	No
Expansion:			

Description

Right-clicking on almost any item in the VAB scene produces a context menu with the part name, any tweakables the part has, etc.

However right-clicking on the BZ-52 Radial Attachment Point does not produce a context menu at all (not even the part name or the nearly universal rigid attachment and auto-strut options), which is confusing.

This is presumably because the part has no tweakables, options, or details to display in the context menu. However it would be preferable if the context menu for such parts WERE displayed, with at least the orange part name bar and pin icon, and possibly a note in the body of the context menu saying "(no options or details available for this part)" or something to that effect.
