Description

If the double click mouse look is disabled, you can still enter mouse look node using double click if you do it in the IVA

1. Disable 'Double Click Mouse Look' in Settings.
2. Enter IVA mode (need to have a crewed part with IVA to do this)
3. Double click when in IVA. You can now begin looking around the interior without holding the buttons.
4. Now exit IVA, either to flight scene or tracking map.
5. You can still right click to mouse look as long as you haven't cancelled it.
