Target version:	
Version: 1.1.3	Language: English (US)
Platform: Windows	Mod Related: No
Expansion:	
Description	
GOG 1.1.3.1289 64bit Clean Install (Stock) Steam 1.3.1.1836 64bit Clean Install (Stock)	
I put this in feedback because its something that has been affecting KSP for a while.	
The Convert-O-Tron 125 is something I like to attach radiators to for obvious reasons however I cant do the same to the Convert-O-Tron 250	
Here is a list of parts that could benefit:	
Rockomax HubMax Multi-Point Connector (the cubic octagonal Strut can be and is a similar size)	
TVR-1180C Mk1 Stack Tri-Coupler	
TVR-200 Stack Bi-Coupler	
TVR-200L Stack Bi-Adapter	
TVR-2160C Mk2 Stack Quad-Coupler	
TVR-300L Stack Tri-Adapter	
The Not-Rockomax Micronode (the cubic octagonal Strut can be and is a similar size)	
Convert-O-Tron 250 (the Convert-O-Tron 125 does have radial attachment) (as per above)
