Description

- **SUMMARY**
The "Cannot warp faster than x1 while the ship is throttled up" message appears even when all engines have run out of fuel.
- **STEPS TO REPRODUCE**
 1. Build a ship
 2. Fly it, and run the current stage out of fuel
 3. Set the ship to full throttle
 4. Attempt to warp
- **EXPECTED RESULTS**
I am allowed to warp, but I drop out of it as soon as I push the space bar to release the next stage
- **ACTUAL RESULTS**
Error message.

Not a bug. The throttled up message is irrespective of any thrust being generated, just that state of the throttle. Additionally, your expected results are not expected in the sense of how the game is programmed to run. More, it's expected as how you would like things to go. Feel free to place a feature request but for now I'm closing this as it's not a bug.
