Description

Hello everyone, going straight to the subject, filtering the parts of the Kerbal Space Program in 1.4, you could find the old pieces and also a special case when you filtered for the 3.75 meters pieces, where you could found sometimes a piece called a Rock more like a potato '. Also stock game ships are with the textures of 1.3. Please KSP dev team, fix these issues :)
Hugs and good launches

History

- File deleted (batata 1.png)

#4 - 03/10/2018 04:29 PM - Nebbie

- Severity changed from High to Normal

The old parts being there is intentional (they still exist, the parts were not retextured, but completely replaced with new ones that exist simultaneously for backwards compatibility), not sure about the potato.

#5 - 06/09/2020 03:18 PM - Robert.Keech

- Status changed from New to Updated
- % Done changed from 0 to 10

Issue no longer occurs. The old parts still being available is intentional. The 'potato' no longer appears in the parts list when filtered by cross-section.
