Description

The detachable doors on the SM-25 Service Module have a gap toward the bottom of the part when they are closed. Simply place one in the VAB/SPH and observe.

The attached screenshot shows the gaps circled in red (bottom of pic), and also shows a Z-400 battery placed inside the SM-25 being able to be seen from the outside.

I do not know if the doors are the correct length and are simply placed too high, or if the doors are placed correctly and are simply too short.
