Description

KSP Enhanced Edition, Second Patch - Updated 19 July 2018 (1.0.2)
This was not an issue with the first patch (KSP Enhanced Edition 1.0.1).

Hello. I would like to take a moment to say how much I enjoy this game, as well as the great amount it has taught me. Thank You for all you have done.

I was building a craft in the VAB, and was assigning part actions to action groups. With the Experimental Storage Unit, I was unable to select "Collect All." Upon my attempts to use a command pod for storage instead, I was unable to select the "Collect All" option for that as well.

Playing with other parts to determine the extent of the Bug, I determined that it was not the "Collect All" option which was broken, but rather whichever action was listed last. Even when selecting the whole list for any given part (from the top and allowing the part actions to shift up and be selected), upon selecting the final action, all actions were deselected and the list was reset.

It appears that when the final part action is selected, it also clicks the "Reset" option below it, deselecting all actions. Other options (those above the last listed option) for part actions seem to select correctly.

While this is not a game-breaking issue, it is rather impeding to me. Part action Groups allow me to better sort and quickly preform several things at once (such as eight science experiments at once, a long nightmare with the console cursor). Not being able to use some of the actions impedes ability, especially with parts with only one action option.
