Expansion:	Core Game, Making History		

Description

Hello, today I was playing some KSP and testing mods, after a while I got tired and closed it, when I opened it again it inmedially crashed when I tried to open it again. Confused by this I tried uninstalling all of my mods and it didnt fix it, then I tried to do a clean KSP install and nothing, I figured it must be because I was using KSP 1.4.3 so I downloaded the last version and It still kept crashing. After a while I decided to check the launch options and I noticed that I had "-force-glcrc" enabled and when I removed it the game worked just fine.

I dont know why this is happening out of nowhere, I was playing just fine and it sudenly stoped working, I ran a system check with /SFC SCANNOW and it retured nothing, I downloaded the last version of my GPU drivers and it still didnt work.

And before you mention it, I tried using DirectX 11 too and it makes some weird graphical bugs to happen, I dont know If I should make a different thread for that one.

The crash log says it has something to do with "nvoglv64.DLL"
Kerbal Space Program [version: Unity 2017.1.3p1 (02d73f71d3bd)]

nvoglv64.DLL caused an Access Violation (0xc0000005)
in module nvoglv64.DLL at 0033:5f583c10.

Error occurred at 2018-09-19_211944.
C:\Steam\steamapps\common\Kerbal Space Program\KSP_x64.exe, run by KDA.
