Description

Compared to the volume of all the other engines in the game, the RV-1 "Cub" Vernier engine (one of the parts that comes with the Making History DLC) is just TOO LOUD. It comes across as being on the order of maybe 2 or 3 times louder than other engines, and it's not even that large. When I have these vernier engines burning, I have to turn down the "engine" sound slider so low I barely hear the other engines, in order to save my hearing in the headphones.

I don't know if this one part having a different volume sound sample than everything else is deliberate or not, but it's been bothering me mildly ever since Making History came out and I finally decided to say something.

- Status changed from New to Confirmed

Setting to confirmed, even though it is feedback. The Cub really is disproportionately loud, and should be adjusted to better mix with the other engine sounds.
