Description

Please give us the ability to use more action groups. For example ALT+0-9 adds another 10 action groups and adding ALT+Backspace will allow us to configure multiple abort modes. Example, Apollo had multiple abort modes in which some would use the LES however once the LES was gone certain occasions may have them separate and use the S-IVB or even do an abort to orbit using the SM. As one abort mode is available it is hard to setup the different abort sequences through stages of flight without enough action groups.
