<b>Expansion:</b>	Core Game		

#### Description

The current system of splashdown particles is rendering too many particles, leading to drastic dips in performance. It can be as bad as 5 fps on a pretty decent gaming rig with a GTX 1060 6G card. Pretty much ANY graphics card that's available for purchase right now is susceptible to the performance drop from what I've seen. It would be greatly appreciated if this system received a much needed tuning.
