#### Description

Just take any robotic part and place it in symmetry. Mirror or radial, it doesn't matter. These parts are not behaving equally, one of the parts is almost always behaves weaker than the other, even if it's locked. Just watch the attached videos, you will know what I mean.

Video #1: <https://youtu.be/ZjVfQxsNaY4>

Video #2: <https://youtu.be/kPxu4J1xbvk>

UPD. Sometimes they both behave weak: <https://youtu.be/plh35JQxcGc>

UPD 2. It looks like even symmetry has nothing to do with it. I just tested it without a symmetry at all, individually placing robotic parts, and it still does it.

#### History

#1 - 11/23/2019 11:28 PM - Kirk

The weaker one also appears to consume 3-4 times as much electricity.

#2 - 11/24/2019 08:02 AM - dok\_377

It also appears that this bug is not constant and sometimes it can fix itself or break again for no reason.

#3 - 11/26/2019 08:47 AM - dok\_377

And I just had it on both hinges in mirror symmetry. They behave weak like they are not even locked, but they are.

- Status changed from Confirmed to Being Worked On

- % Done changed from 10 to 30

**#13 - 07/03/2020 10:54 AM - just\_jim**

- Status changed from Being Worked On to Ready to Test

- Target version set to 1.10.0

- % Done changed from 30 to 80

This should be working now in 1.10

**#14 - 07/03/2020 11:58 AM - dok\_377**
