I used Microsoft Surface Book2 15" 【i7-8565U】16G】GTX1060 6G】512G SSD】】Not AMD GPU.
nVidia driver version: 442.19(Nvidia Studio)

Interesting. I see nothing wrong with your specifications. Was it a clean install?

Yes】I use Steam to install and update the game. Use Nvidia Experience to update the GPU driver.

In the past when a new version of KSP comes out, I will delete the entire KSP folder under steam and then get it to verify the integrity of the the files. steam will see all the files are missing and then replace them all.

#6 - 03/01/2020 10:20 AM - Anth12

Oh...your log file indicates mods. Remove all mods and then try again

> steam will see all the files are missing and then replace them all.

I used Steam's game integrity verification. Steam reminds me of missing 9 files

I reinstalled the game and added the mod. Found to be a problem with the SCANSat module. When I deleted this module, it was ready to use.

Good. Not a bug (KSP bug tracker is only for unmodded installs)

#10 - 03/02/2020 10:45 AM - Anth12

- Subject changed from Cannot enter the game to Cannot enter the game (Please Set this to: Not a bug or moot etc) Was mod related

#11 - 03/02/2020 02:28 PM - Robert.Keech

- Status changed from New to Not a Bug
