

## Kerbal Space Program - Bug #25155

### Game interprets Alt Gr (European keyboard Right Alt) as Left Control.

#### Description

Alt Gr activates the 'throttle down' control, cannot be rebound, appears as LeftControl if bound to something ingame.

#### History

##### #1 - 04/13/2020 08:31 PM - RocketWitch

Since it's next to the default timewarp controls ( < and > ) I often find it easier to press right alt (which is Alt Gr on various languages' keyboards) when adjusting physwarp levels, but this also changes the throttle. In the settings nothing is specified about this key affecting throttle. Trying to bind it to any commands ingame shows it as LeftControl, and since that's the default throttle 'down control' it appears the game actually interprets Alt Gr as this.
