| Description | | | |
| <p>It's really annoying me that the first thing I have to do every single time I enter the trackingstation is hiding the flags. I really like placing them in all kinds of places as memories and marks of achievements and I'm surely not the only one who does that and I'm surely also not the only one annoyed that there are then 200 flights of which only 20 are actual vessels and the rest are flags. Ok the numbers are exaggerated but you hopefully get the point.</p> <p>So please either remove them from the default listing setting so they are hidden by default or just make it remember whatever you've set it to. That actually make more sense anyways.</p> <p>Also there's a small bug regarding flags which is that the number of active flights in the save loading screen counts flags as active flights too which is in my opinion wrong, the aren't even moving at all let alone fly.</p> | | | |
