Description

Onion, Pea, and Pomegranate decoupler not working (icon is present in staging). Present since 1.10.0 and still present in 1.10.1

History

- Status changed from New to Need More Info

They are working for me. I'm completely stock, v1.10.1, OSX.

I did notice their ejection force is very low. When I tested on the ground at the launchpad, they decoupled but didn't go anywhere. I built a rig with the pods (one of each) mounted horizontally from a central tube. When I decoupled, the pods fell. I tested by decoupling through the staging command, and also by decoupling via the PAW for each pod.
