Version:	1.9.1	Language:	English (US)
Platform:	Windows	Mod Related:	No
Expansion:	Breaking Ground, Core Game, Making History		

Description

The checkbox for action sets that allows you to override the default action groups forgets its setting and goes back to beeing untoggled. The same is happening to the name i give to that action set. This happens between scene frames or between saves. Sometimes i run a lot of other missions with other ships and come back to a ship that does this.

I have had this happen on several ships on numerous occasions. I've set up a second action set in teh VAB, set the checkbox to override default then later in my career found that the checkbox has been unchecked and the name i assigned (eg; "Landing") to that action set forgotten. Needless to say Jeb payed with his life.

This happens a lot of the times. More than 75% accurence. It also happens in 1.10, not just 1.9.1

Please save Jeb !
