Version:	1.11.0	Language:	English (US)
Platform:	Windows	Mod Related:	No
Expansion:	Core Game		
Description			
Two problems on one: 1) If you have multiple controllers, they all shares buttons, joy1 button 0 is same than joy2 button 0 2) If you have same named controllers, only one is used by game, other is removed, this is problem when i bought bundle which came with two t.1600m hotas, left and right, they have same name on windows control panel. Checked this with ctrl+alt+f12 in-game too. both of these leads situation where people with multiple controllers gets frustated when they only can use one.
