

Kerbal Space Program - Feedback #27114

Rover wheel sensitivity values for steering and breaking need improvement.

Description

steering is quite snappy and breaking is problematic too.

Here is near perfect values for wheels:

```
brakeResponse =0.2 // Original 1
```

```
steeringResponse = 1 //original 2
```

```
steeringCurve
```

```
{  
    key = 0 30  
    key = 15 0.01  
}
```
